C; Comment: This protein belongs to a member of the human nerve-growth-factor/tumor-necro
C; Comment: This receptor recongnizes soluble, cell-surface bound or extracellular matrix
C; Superfamily: CD27 antigen; NGF receptor repeat homology
C; Keywords: glycoprotein; phosphoprotein; receptor; transmembrane protein
E;1-17/Domain: signal sequence #status predicted <NGS
C; Keywords: glycoprotein; phosphortein; receptor ILA #status predicted
E;18-213/Domain: transmembrane #status predicted <NGN) (covalent) #status predicted
E;242/Binding site: phosphate (Thr) (covalent) (by casein kinase II) #status predicted
E;242/Binding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted

A; Title: Human and baboon integrin beta 5 subunit-encoding mRNAs have alternative polyad
A; Reference number: JC2005; MUID: 94040831; PMID: 8224922
A; Molecule type: mRNA
A; Residues: 1-656 <SHO>
A; Note: the authors translated the codon AGA for residue 454 as Lys, CAA for residue 471
C; Comment: This protein is a predominant subunit for the vitronectin receptor in baboon C; Superfamily: integrin beta chain; laminin-type EGF-like homology <LEG>
C; Superfamily: call adhesion
F; 320-370/Domain: laminin-type EGF-like homology <LEG>

C;Complex: Laminins are trimers of an alpha-type, a beta-type, and a gamma-type laminin c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (covalent) #status experinabsent JC6148
subtilisin-like proprotein convertase (EC 3.4.21.-) homolog - human
N;Alternate names: PC6A protease
C;Species: Homo sapiens (man)
C;Daccies: 11-Apr-1997 #sequence_revision 09-May-1997 #text_change 22-Jun-1999
C;Accession: JC6148
R;Miranda, L.; Wolf, J.; Pichuantes, S.; Duke, R.; Franzusoff, A.
Proc. Natl. Acad. Sci. U.S.A. 93, 7695-7700, 1996
A;Title: Isolation of the human PC6 gene encoding the putative host protease for HIV-1

A, Reference number: JC6148; MUID:96353880; PMID:8755538

A;Molecule type: mRNA
A;Molecule type: mRNA
A;Residues: 1-915 <MIR>
A;Residues: 1-915 <MIR>
A;Cross-references: GB:U56387; NID:g1498312; PIDN:AAC50643.1; PID:g1498313
C;Comment: This protein functions as a soluble enzyme within the secretory pathway. It
C;Genetics:
A;Gene: pc6A
C;Superfamily: subtilisin-like proteinase PACE4; subtilisin homology
C;Keywords: glycoprotein; hydrolase; serine proteinase
F;164-402/Domain: subtilisin homology <SBT>

. 7

A novel leucine-rich repeat protein (LRR-1): potential involvement in 4-1BB-mediated signal transduction.";

Mol. Cells 12:304-312(2001)

C -! FUNCTION: Receptor for TNFSF14/4-1BBL. Possibly active during T cell activation.

C -: SUBMIT: Interacts with TRAF1, TRAF2 AND TRAF3. Interacts with LRR-repeat protein 1/LRR-1.

C -: SUBMIT: SECRIFICITY: Expressed on the surface of activated T cells.

C -: SIMILARITY: Contains 4 TNFR-Cys repeats.

C -: DATABASE: NAME=PROW; NOTE=CD guide CDw137 entry;

"TRAFS, an activator of NF-kappaB and putative signal transducer for the lymphotoxin-beta receptor.";
J. Biol. Chem. 271:14661-14664(1996).
-!- FUNCTION: Receptor for the heterotrimeric lymphotoxin containing LTA and LTB, and for TNFS14/LIGHT. Promotes apoptosis via TRAF3 and TRAFS. May play a role in the development of lymphoid organs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (By similarity).
-!- SUBUNIT: Self-associates (By similarity). Associates with TRAF5.
Associates with TRAF3 and TRAF4 (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Contains 4 TNFR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Honjo T.;.

"RANK is the essential signaling receptor for osteoclast differentiation factor in osteoclastogenesis.";
Biochem. Biophys. Res. Commun. 253:395-400(1998).
-!- FUNCTION: Receptor for TNFSF11/RANKL/TRANCE/OPGL; essential for RANKL-mediated osteoclastogenesis. Involved in the regulation of interactions between T-cells and dendritic cells.

    similarity).
    SUBCELLULAR LOCATION: Type I membrane protein (Potential).
    TISSUE SPECIFICITY: UBIQUITOUS EXPRESSION WITH HIGH LEVELS IN TRABECULAR BONE, THYMUS, SMALL INTESTINE, LUNG, BRAIN AND KIDNEY.
    WEAKLY EXPRESSED IN SPLEEN AND BONE MARROW.
    SIMILARITY: Contains 4 TNFR-Cys repeats.

-!- TISSUB SPECIFICITY: B-cells and in primary carcinomas.
-!- DISEASE: Defects in TNFRSF5 are the cause of hyper-IgM immunodeficiency type 3 (HIGM3) [MIM:606843]. HIGM3 is an autosomal recessive disorder which includes an inability of B cells to undergo isotype switching, one of the final differentiation steps in the humoral immune system, an inability to mount an antibody-specific immune response, and a lack of germinal center formation.
-!- SIMILARITY: Contains 4 TNFR-Cys repeats.

-!- DISEASE: Defects in TNFRSF11A are the cause of familial expansile osteolysis (FEO) [MIM:174810]. FEO is a rare autosomal dominant bone disorder characterized by focal areas of increased bone remodelling. The osteolytic lesions develop usually in the long bones during early adulthood. FEO is often associated with early onset deafness and loss of dentition.

-!- DISEASE: Defects in TNFRSF11A are a cause of Paget disease of bone 2 (PBB2) [MIM:602080]; also known as familial Paget disease of bone. PDB2 is a bone remodelling disorder with clinical similarities to FEO. Unlike FEO, however, affected individuals have involvement of the axial skeleton with lesions in the spine, pelvis and skull.

-!- SIMILARITY: Contains 4 TNFR-Cys repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anderson D.M.;
"Mutations in TNFRSF11A, affecting the signal peptide of RANK, cause familial expansile osteolysis.";
Nat. Genet. 24:45-48(2000).
-!- FUNCTION: Receptor for TNFSF11/RANKL/TRANCE/OPGL; essential for RANKL-mediated osteoclastogenesis. Involved in the regulation of interactions between T-cells and dendritic cells.
-!- SUBCNLT: Interacts with TRAF1, TRAF2, TRAF3, TRAF5 and TRAF6.
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-!- TISSUE SPECIFICITY: Ubiquitous expression with high levels in skeletal muscle, thymus, liver, colon, small intestine and adrenal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bone
